A Berestycki-Lions type result and applications

Claudianor O. Alves (UFCG) coalves@dme.ufcg.edu.br, M.A.S Souto, R.C. Duarte

Resumo/Abstract:
In this paper, by using variational we have showed an Abstract Theorem which permits to prove a Berestycki-Lions type results for a class of elliptic problem in whole $\mathbb{R}^N$ whose the nonlinearity is discontinuous. Moreover, new results are also obtained when the nonlinearity is continuous.
