## Explicit bound for a conjecture of lang on curves over function fields

## Amílcar Pacheco (Universidade Federal do Rio de Janeiro, Brazil)

#### Abstract

: Let $\$ K \$$ be a one variable function field over a finite field of characteristic $\$ p \$$, \$X\$ a non-isotrivial smooth, projective, geometrically connected curve over \$K\$ of genus $\$ d \backslash g e 2 \$$ with Jacobian variety $\$ J \$$. Suppose $\$ p>2 d+1 \$$. Let $\$ \mathrm{~K} \_$s\$ be a separable closure of $\$ K \$$ and $\$ \backslash$ amma a subgroup of $\$ J\left(K \_s\right) \$$ such that \$\Gamma/p\Gamma\$ is finite. Give an explicit bound for the number of points of \$X\$ which lie on \$\Gamma\$. This is joint work with F. Pazuki.
