#### Livšic theorem for diffeomorphism cocycles

Alejandro Kocsard (joint with Rafael Potrie)

Universidade Federal Fluminense Brazil

Second Palis-Balzan International Symposium on Dynamical Systems

### Hyperbolic dynamics

Our setting:

 $\bullet \ M \ {\rm closed} \ {\rm smooth} \ {\rm manifold} \\$ 

• • • • • • • • • • • •

### Hyperbolic dynamics

#### Our setting:

- M closed smooth manifold
- $f: M \hookrightarrow C^r$ -diffeomorphism

#### Hyperbolic set

An *f*-invariant compact set  $\Lambda \subset M$  is **hyperbolic** if  $T_{\Lambda}M = E^s \oplus E^u$  and  $\exists \lambda \in (0, 1)$  and  $\|\cdot\|$  on TM s.t.

•  $E^s$  and  $E^u$  are Df-invariant

• 
$$\|Df|_{E^s}\| \leq \lambda, \|Df^{-1}|_{E^u}\| \leq \lambda.$$

★ ∃ ► ★

### Hyperbolic dynamics

#### Our setting:

- M closed smooth manifold
- $f: M \hookrightarrow C^r$ -diffeomorphism

#### Hyperbolic set

An *f*-invariant compact set  $\Lambda \subset M$  is **hyperbolic** if  $T_{\Lambda}M = E^s \oplus E^u$  and  $\exists \lambda \in (0,1)$  and  $\|\cdot\|$  on TM s.t.

•  $E^s$  and  $E^u$  are Df-invariant

• 
$$\|Df|_{E^s}\| \leq \lambda, \|Df^{-1}|_{E^u}\| \leq \lambda.$$

#### Anosov diffeomorphism

f is  $\ensuremath{\mathbf{Anosov}}$  if M is hyperbolic set

### Cocycles and Coboundaries

G-cocycles

Let G be a topological group. A  $G\text{-}\mathbf{cocycle}$  is a map  $\Phi\colon M\to G.$  We write

$$\Phi^{(n)}(p) := \Phi(f^{n-1}(p))\Phi(f^{n-2}(p))\cdots\Phi(p)$$

### Cocycles and Coboundaries

#### G-cocycles

Let G be a topological group. A  $G\text{-}\mathbf{cocycle}$  is a map  $\Phi\colon M\to G.$  We write

$$\Phi^{(n)}(p) := \Phi(f^{n-1}(p))\Phi(f^{n-2}(p))\cdots\Phi(p)$$

#### Coboundaries

 $\Phi$  is a **coboundary** when  $\exists u \colon M \to G$  (continuous) such that

$$\Phi_p = u(f(p))(u(p))^{-1}, \quad \forall p \in M$$

▲ □ ▶ ▲ □ ▶ ▲ □ ▶

## Cocycles and Coboundaries

#### G-cocycles

Let G be a topological group. A  $G\text{-}\mathbf{cocycle}$  is a map  $\Phi\colon M\to G.$  We write

$$\Phi^{(n)}(p) := \Phi(f^{n-1}(p))\Phi(f^{n-2}(p))\cdots\Phi(p)$$

#### Coboundaries

 $\Phi$  is a **coboundary** when  $\exists u \colon M \to G$  (continuous) such that

$$\Phi_p = u(f(p))(u(p))^{-1}, \quad \forall p \in M$$

#### Periodic Orbit Obstructions (POO)

Necessary condition to be a cocycle:

$$\Phi^{(n)}(p) = u(f^n(p))u(p)^{-1} = id_G, \quad \forall p \in \operatorname{Fix}(f^n)$$

Idea of the proof  $(G = \text{Diff}^r(\mathbb{T}))$ 

 $\bullet$  Consider the skew-product  $\widehat{f}\colon M\times \mathbb{T} \circlearrowleft$  given by

$$\hat{f}(x,t) = (f(x), \Phi_x(t)), \quad \forall (x,t) \in M \times \mathbb{T}$$

• We want a codimension-one  $\hat{f}$ -invariant foliation given by graphs

#### Proposition 1

 $\hat{f}$  is absolutely **partially hyperbolic**, with

$$\widehat{\mathcal{W}}^c(x,t) = \{x\} \times \mathbb{T},$$

and every central Lyapunov exponent  $\lambda^c = 0$ 

**O** Suppose  $\exists n_k \uparrow \infty$  and  $(x_k, t_k) \in M \times \mathbb{T}$  s.t.

$$\left|\partial_t \hat{f}^{n_k}(x_k, t_k)\right| < \lambda^{n_k}$$

■ Suppose  $\exists n_k \uparrow \infty$  and  $(x_k, t_k) \in M \times \mathbb{T}$  s.t.

$$\left|\partial_t \hat{f}^{n_k}(x_k, t_k)\right| < \lambda^{n_k}$$

2 Let  $\mu \in \mathfrak{M}(\hat{f})$  be an accumulation point of the sequence  $(\mu_k)_k$ 

$$\mu_k := \frac{1}{n_k} \sum_{j=0}^{n_k - 1} \hat{f}_{\star}^j \delta_{(x_k, t_k)}$$

■ Suppose  $\exists n_k \uparrow \infty$  and  $(x_k, t_k) \in M \times \mathbb{T}$  s.t.

$$\left|\partial_t \hat{f}^{n_k}(x_k, t_k)\right| < \lambda^{n_k}$$

2 Let  $\mu \in \mathfrak{M}(\widehat{f})$  be an accumulation point of the sequence  $(\mu_k)_k$ 

$$\mu_k := \frac{1}{n_k} \sum_{j=0}^{n_k - 1} \hat{f}_{\star}^j \delta_{(x_k, t_k)}$$

 $\bullet$   $\mu$  is a hyperbolic measure

■ Suppose  $\exists n_k \uparrow \infty$  and  $(x_k, t_k) \in M \times \mathbb{T}$  s.t.

$$\left|\partial_t \hat{f}^{n_k}(x_k, t_k)\right| < \lambda^{n_k}$$

2 Let  $\mu \in \mathfrak{M}(\widehat{f})$  be an accumulation point of the sequence  $(\mu_k)_k$ 

$$\mu_k := \frac{1}{n_k} \sum_{j=0}^{n_k - 1} \hat{f}^j_{\star} \delta_{(x_k, t_k)}$$

- $\bullet$   $\mu$  is a hyperbolic measure
- **(9)** By Katok Closing Lemma,  $\exists$  hyperbolic periodic points for  $\hat{f}$

■ Suppose  $\exists n_k \uparrow \infty$  and  $(x_k, t_k) \in M \times \mathbb{T}$  s.t.

$$\left|\partial_t \hat{f}^{n_k}(x_k, t_k)\right| < \lambda^{n_k}$$

2 Let  $\mu \in \mathfrak{M}(\hat{f})$  be an accumulation point of the sequence  $(\mu_k)_k$ 

$$\mu_k := \frac{1}{n_k} \sum_{j=0}^{n_k - 1} \hat{f}^j_{\star} \delta_{(x_k, t_k)}$$

- $\mu$  is a hyperbolic measure
- **9** By Katok Closing Lemma,  $\exists$  hyperbolic periodic points for  $\hat{f}$
- Solution  $\hat{f}$  doesn't have any hyperbolic periodic point!

**③** Suppose  $\exists n_k \uparrow \infty$  and  $(x_k, t_k) \in M \times \mathbb{T}$  s.t.

$$\left|\partial_t \hat{f}^{n_k}(x_k, t_k)\right| < \lambda^{n_k}$$

2 Let  $\mu \in \mathfrak{M}(\widehat{f})$  be an accumulation point of the sequence  $(\mu_k)_k$ 

$$\mu_k := \frac{1}{n_k} \sum_{j=0}^{n_k - 1} \hat{f}_{\star}^j \delta_{(x_k, t_k)}$$

- $\mu$  is a hyperbolic measure
- **(9)** By Katok Closing Lemma,  $\exists$  hyperbolic periodic points for  $\hat{f}$
- Solution  $\hat{f}$  doesn't have any hyperbolic periodic point!
- **(9)** By classical cone field arguments,  $\hat{f}$  is absolutely partially hyperbolic

•  $\mathcal{W}^s$  and  $\mathcal{W}^u$  stable and unstable foliations of f

• • • • • • • • • • • •

- $\mathcal{W}^s$  and  $\mathcal{W}^u$  stable and unstable foliations of f

Proposition 3

 $\forall t_0 \in \mathbb{T} \text{ and } \forall (x, t) \in \mathcal{V}_{t_0}$ 

 $\widehat{\mathcal{W}}^{s,u}(x,t) \subset \mathcal{V}_{t_0}$ 

Corollary of Prop 3  $\mathcal{V} = (\mathcal{V}_t)_{t \in \mathbb{T}}$  is a foliation The leaves of  $\mathcal{V}$  are  $C^r$ 

イロト 不得 トイヨト イヨト 二日

It is a straightforward consequence of

Theorem (Topological Invariant Principle) [Avila-Viana,2010]

Let  $\hat{f} \colon M \times X \mathfrak{t}$  be a skew-product over  $f \colon M \mathfrak{t}$  and  $\hat{\mu} \in \mathfrak{M}(\hat{f})$  s.t.:

- $\hat{f}$  admits s, u-holonomies
- **2** every fibered Lyapunov exponent of  $\hat{\mu}$  vanishes
- **③**  $\hat{\mu}$  project over an *f*-invariant measure with l.p.s.

Then, the disintegration  $(\hat{\mu}_x)_{x \in M}$  of  $\hat{\mu}$  along the fibers varies continuously with x and it's **invariant along** s, u-holonomies.

#### It's a straight forward consequence of

#### Theorem [Journé, 1988]

Let  $\Psi: M \to \mathbb{R}$  be a continuous function such that it is  $C^r$  along  $\mathcal{W}^s$  and  $\mathcal{W}^u$ -leaves. Then,  $\Psi$  is  $C^r$ .

### Defining u

Now we can define the "transfer" function  $u: M \to \text{Diff}^r(\mathbb{T})$  satisfying

$$\Phi_x = u_{f(x)} \circ u_x^{-1}, \quad \forall x \in M$$

### Defining u

Now we can define the "transfer" function  $u: M \to \text{Diff}^r(\mathbb{T})$  satisfying

$$\Phi_x = u_{f(x)} \circ u_x^{-1}, \quad \forall x \in M$$

Fixing  $t \in \mathbb{T}$ , we define  $\alpha_t \colon M \to \mathbb{R}$  by

$$\alpha_t(x) := \log \partial_t \Phi_x \big|_{V_{x_0,t}(x)}, \forall x \in M$$

Fixing  $t \in \mathbb{T}$ , we define  $\alpha_t \colon M \to \mathbb{R}$  by

$$\alpha_t(x) := \log \partial_t \Phi_x \big|_{V_{x_0,t}(x)}, \forall x \in M$$

Fixing  $t \in \mathbb{T}$ , we define  $\alpha_t \colon M \to \mathbb{R}$  by

$$\alpha_t(x) := \log \partial_t \Phi_x \big|_{V_{x_0,t}(x)}, \forall x \in M$$

Observe  $\alpha_t \in C^{r-1}(M, \mathbb{R})$  satisfies POO over f, so by "classical" Livšic theorem, there exists  $v \in C^{r-1}(M, \mathbb{R})$  satisfying

$$\alpha_t(x) = v(f(x)) - v(x), \quad \forall x \in M$$

\* (四) \* \* (日) \* (日) \*

Fixing  $t \in \mathbb{T}$ , we define  $\alpha_t \colon M \to \mathbb{R}$  by

$$\alpha_t(x) := \log \partial_t \Phi_x \big|_{V_{x_0,t}(x)}, \forall x \in M$$

Observe  $\alpha_t \in C^{r-1}(M, \mathbb{R})$  satisfies POO over f, so by "classical" Livšic theorem, there exists  $v \in C^{r-1}(M, \mathbb{R})$  satisfying

$$\alpha_t(x) = v(f(x)) - v(x), \quad \forall x \in M$$

Therefore, the  $\mathcal{V}$ -holonomies are  $C^r$ !

Fixing  $t \in \mathbb{T}$ , we define  $\alpha_t \colon M \to \mathbb{R}$  by

$$\alpha_t(x) := \log \partial_t \Phi_x \big|_{V_{x_0,t}(x)}, \forall x \in M$$

Observe  $\alpha_t \in C^{r-1}(M, \mathbb{R})$  satisfies POO over f, so by "classical" Livšic theorem, there exists  $v \in C^{r-1}(M, \mathbb{R})$  satisfying

$$\alpha_t(x) = v(f(x)) - v(x), \quad \forall x \in M$$

Therefore, the  $\mathcal{V}$ -holonomies are  $C^r$ !

#### Remarks

• Everything but vanishing fibered Lyapunov exponent works in higher dimensions

Fixing  $t \in \mathbb{T}$ , we define  $\alpha_t \colon M \to \mathbb{R}$  by

$$\alpha_t(x) := \log \partial_t \Phi_x \big|_{V_{x_0,t}(x)}, \forall x \in M$$

Observe  $\alpha_t \in C^{r-1}(M, \mathbb{R})$  satisfies POO over f, so by "classical" Livšic theorem, there exists  $v \in C^{r-1}(M, \mathbb{R})$  satisfying

$$\alpha_t(x) = v(f(x)) - v(x), \quad \forall x \in M$$

Therefore, the  $\mathcal{V}$ -holonomies are  $C^r$ !

#### Remarks

- Everything but vanishing fibered Lyapunov exponent works in higher dimensions
- For the smoothness of  $\mathcal{V}$ -holonomies we need Kalinin thm instead of classical Livšic one in higher dim

# Merci beaucoup!
