

# Geometry of the moduli of parabolic bundles on elliptic curves

Nestor Fernández Vargas (Université de Rennes 1)

## **Resumo/Abstract:**

We are interested in rank 2 parabolic vector bundles over a 2-punctured elliptic curve  $C$ . We will describe the moduli space associated to these objects, and state a Torelli theorem.

The former moduli space is itself related to the moduli space of rank 2 parabolic bundles over a 5-punctured  $P^1$ . We will explain this link, recovering at the same time the beautiful geometry of del Pezzo surfaces of degree 4.
