Sharp Decay at distinct times for some dispersive equations

Luca Fanelli[1]

[1] Università di Roma, Italy

We will discuss some recent results concerned with unique continuation properties, at distinct times, of some dispersive models. These includes Schrödinger and Zakharov-Kutsnetsov equation. The results mainly rely on suitable Carleman type estimates and are purely involving real variable methods. Collaborations with B. Cassano, L. Cossetti, F. Linares.
